

Please submit these 10 page paper on the topics below and send to me by mail (princenk@yahoo.com). Name file by your index number. You have 7 days to submit. Ensure you reference all your sources using the schools standards for referencing. You must also paraphrase your sources and not copy to avoid plagiarism.

1. In what ways does the architecture of satellite communication facilitate global internet access, and what are the specific technical and economic trade-offs when implementing it as an alternative or supplement to fiber optic networks?
2. How does Power Line Carrier Communication (PLCC) superimpose high-frequency data signals onto a low-frequency power transmission line? Elaborate on the function of each main component—specifically the **line trap**, **coupling capacitor**, and **line matching unit**—and explain their necessity for successfully transmitting and receiving communication data without interfering with the primary power supply.
